

Iter 136 — Step-level trajectory coupling (Δ reward, Δ length): 8/8 paired tests in predicted direction, global p=0.0039

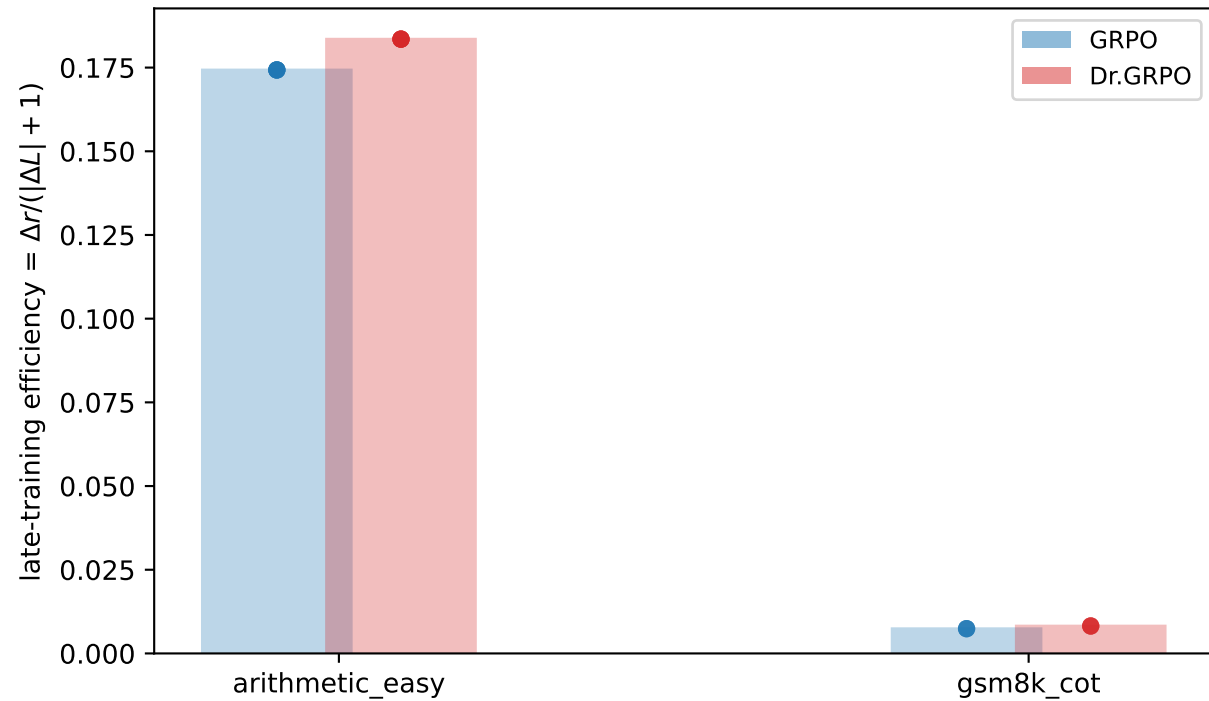

A. Effect size per (task, hypothesis); error bars = 95% boot CI

B. Global sign test: 8/8 in predicted direction; one-sided binom p=0.0039

C. H3 late-training efficiency (GR blue, Dr.GR red); dots = seeds

D. H4 ZVF-length co-movement; >0 = ZVF falls with length shrink
