

(A) Joint acc(G,T) fit: $R^2=0.796$, $n=20$

(B) $G^*(T)$ -- +0.50/decade of T

(C) Bounded cone: acc(G) at 4 budgets ($G=64 \leq G=32$ at every T)

(D) Value of T at fixed G (compute helps larger G more)
amplification of G value = 24.0x from T=1M to T=64M
